transmissions into a cohesive networking infrastructure centered on the Internet Protocol. Converged networks, which combine voice, data, fax and video transmissions into a cohesive networking infrastructure -- all centered on the Internet Protocol, or IP -- promise a number of advantages over existing, separate networking environments. But to successfully design and implement a converged network requires expertise on both the voice and data networking sides of the house. Unfortunately, few individuals have these credentials -- either you are a voice networking expert, and familiar with circuit switching and connections between PBXs, or you are a data networking expert, familiar with packet switching and connections between routers and servers. The objective of this text is to bridge the gap between the voice and data networking sides, and provide the reader with the opportunity to fill in their areas of weakness with solid technical information. In addition, this text presents a number of case studies, from architectural, financial and technical perspectives that illustrate real-world applications for these technologies. A brilliant, beautiful account of how British boffins triumphed across the decades in creating everything from computer games to Martian landers. The book contains chapters on the Beagle II, Elite - the 80s computer game, the Blue Streak missile, Concorde, mobile phone technology and the Human Genome Project, among others. Britain is the only country in the world to have cancelled its space programme just as it put its first rocket into orbit. Starting with this forgotten episode, 'Backroom Boys' tells the bittersweet story of how one country lost its industrial tradition and got back something else. Sad, inspiring, funny and ultimately triumphant, it follows the technologists whose work kept Concorde flying, created the computer game, conquered the mobile-phone business, saved the human genome for the human race - and who now are sending the Beagle 2 probe to burrow in the cinnamon sands of Mars. 'Backroom Boys' is a vivid love-letter to quiet men in pullovers, to those whose imaginings take shape not in words but in mild steel and carbon fibre and lines of code. Above all, it is a celebration of big dreams achieved with slender means. Always study with the most up-to-date prep! Explains the use of reflexology as a natural healing technique. Human attention is in the highest demand it has ever been. The drastic increase in available information has compelled individuals to find a way to sift through the media that is literally at their fingertips. Content

recommendation systems have emerged as the technological solution to this social and informational problem, but they've also created a bigger crisis in confirming our biases by showing us only, and exactly, what it predicts we want to see. *Data versus Democracy* investigates and explores how, in the era of social media, human cognition, algorithmic recommendation systems, and human psychology are all working together to reinforce (and exaggerate) human bias. The dangerous confluence of these factors is driving media narratives, influencing opinions, and possibly changing election results. In this book, algorithmic recommendations, clickbait, familiarity bias, propaganda, and other pivotal concepts are analyzed and then expanded upon via fascinating and timely case studies: the 2016 US presidential election, Ferguson, GamerGate, international political movements, and more events that come to affect every one of us. What are the implications of how we engage with information in the digital age? *Data versus Democracy* explores this topic and an abundance of related crucial questions. We live in a culture vastly different from any that has come before. In a society where engagement is currency, we are the product. Understanding the value of our attention, how organizations operate based on this concept, and how engagement can be used against our best interests is essential in responsibly equipping ourselves against the perils of disinformation. **Who This Book Is For** Individuals who are curious about how social media algorithms work and how they can be manipulated to influence culture. Social media managers, data scientists, data administrators, and educators will find this book particularly relevant to their work. There are a wide range of variables for actuaries to consider when calculating a motorist's insurance premium, such as age, gender and type of vehicle. Further to these factors, motorists' rates are subject to experience rating systems, including credibility mechanisms and Bonus Malus systems (BMSs). Actuarial Modelling of Claim Counts presents a comprehensive treatment of the various experience rating systems and their relationships with risk classification. The authors summarize the most recent developments in the field, presenting ratemaking systems, whilst taking into account exogenous information. Probing the shortcomings of contemporary early years provision, whilst offering practical and informed solutions, Early Childhood Education Redefined at once celebrates the progress made in this field since the publication of the 'Start Right Report' (1994), whilst also calling for further changes to ensure that all children are able to 'start right', to become effective, independent learners. Developing and emphasising the importance of concepts which have become overlooked within modern educational policy and practice, yet which remain key to our children's development, this book considers how elements such as attachment and love; movement and exercise; and language and talk may be better integrated into early years practice via the three main vectors of parenting, the curriculum, and pedagogy. From a revised curriculum from birth to seven renamed Key Stage 1, to a greater emphasis on formative assessment, and the promotion of pedagogies including purposeful play, planning in the moment and

attachment theory, chapters build on the principles set out in the 'Start Right Report' and take into consideration the research and reflection developed over the last quarter of a decade. Reopening a vital debate and challenging governments, education providers, parents and professionals to re-define what young children need to grow, develop and learn in our contemporary society, this timely response to the 'Start Right Report' is essential reading for all those involved in early years research, education and care.

Most insurers around the world have introduced some form of merit-rating in automobile third party liability insurance. Such systems, penalizing at-fault accidents by premium surcharges and rewarding claim-free years by discounts, are called bonus-malus systems (BMS) in Europe and Asia. With the current deregulation trends that concern most insurance markets around the world, many companies will need to develop their own BMS. The main objective of the book is to provide them models

to design BMS that meet their objectives. Part I of the book contains an overall presentation of the pros and cons of merit-rating, a case study and a review of the different probability distributions that can be used to model the number of claims in an automobile portfolio. In Part II, 30 systems from 22 different countries, are evaluated and ranked according to their 'toughness' towards policyholders. Four tools are created to evaluate that toughness and provide a tentative classification of all systems. Then, factor analysis is used to aggregate and summarize the data, and provide a final ranking of all systems. Part III is an up-to-date review of all the probability models that have been proposed for the design of an optimal BMS. The application of these models would enable the reader to devise the system that is ideally suited to the behavior of the policyholders of his own insurance company. Finally, Part IV analyses an alternative to BMS; the introduction of a policy with a deductible.

In this entertaining cultural history, Moss explores the circumstances that led to the establishment of the country club as an American social institution and its inextricable connection to the ancient, imported game of golf. Moss traces the evolution of country clubs from informal groups of golf-playing friends to "country estates" in the suburbs and eventually into public and private daily-fee courses, corporate country clubs, and gated golfing communities. The book shows how these developments reflect shifts in American values and attitudes toward health and sport, as well as changing social dynamics.
