Elementary Differential Equations and Boundary Value
Problems Jun 02 2020 Elementary Differential Equations and
Boundary Value Problems 11e, like its predecessors, is written
from the viewpoint of the applied mathematician, whose interest
in differential equations may sometimes be quite theoretical,
sometimes intensely practical, and often somewhere in between.
The authors have sought to combine a sound and accurate (and
not abstract) exposition of the elementary theory of differential
equations with considerable material on methods of solution,
analysis, and approximation that have proved useful in a wide
variety of applications. While the general structure of the book
remains unchanged, some notable changes have been made to
improve the clarity and readability of basic material about
differential equations and their applications. In addition to
expanded explanations, the 11th edition includes new problems

updated figures and examples to help motivate students. The program is primarily intended for undergraduate students of mathematics, science, or engineering, who typically take a course on differential equations during their first or second year of study. The main prerequisite for engaging with the program is a working knowledge of calculus, gained from a normal two- or three-semester course sequence or its equivalent. Some familiarity with matrices will also be helpful in the chapters on systems of differential equations.

Weiten surveys psychology's broad range of content with
aims: to illuminate the process of research and its intrinsic
relationship to application (themes); to show both the unit
diversity of the subject (variations), and to invite users to
study of psychology by respecting their ability to master its
fundamental concepts. Weiten's themes (including empirici
theoretical diversity, sociohistorical contexts, multifactorial
causation, cultural heritage, heredity and environment, and
subjectivity of experience) and variations provide unifying
threads across chapters that help users see the connection
among different research areas in psychology.
